

# MIT App Inventor Text Files Cheat Sheet

Visit [appinventor.pevest.com](http://appinventor.pevest.com) for more fun stuff

## Designer

For more information about text files, go to <http://appinventor.pevest.com/?p=490>

For information about files, *TinyDB*, *TinyWebDB*, and *Fusion Tables*, please consult *App Inventor 2 Databases and Files (322 pages)* at [http://appinventor.pevest.com/?page\\_id=33](http://appinventor.pevest.com/?page_id=33)

```

when btnWrite .Click
do
  call File1 .AppendToFile
    text "Line of text\n"
    fileName "testfile2.txt"
  call Notifier1 .ShowAlert
    notice "One line of text written."

when btnDelete .Click
do
  call File1 .Delete
    fileName "testfile2.txt"
  
```

*AppendToFile* outputs the given text to the file. For multi-line text files, add `\n` (newline) at end of each line.

```

when btnRead .Click
do
  call File1 .ReadFrom
    fileName "testfile2.txt"

when File1 .GotText
do
  set txtFileContent .Text to get text
  
```

*ReadFrom* initiates reading the entire file, all at once. The file is not all read until the *GotText* event occurs. Use List functions to convert CSV files to/from text/list format.

```

when Screen1 .ErrorOccurred
do
  call Notifier1 .ShowMessageDialog
    message join
      get component
      "."
      get functionName
      "#"
      get errorNumber
      "-"
      get message
    title "File Error"
    buttonText "Ok"
  
```

If errors occur, this event handler displays the error codes on screen
